The UK's Energy Estuary

The Humber has powered the UK economy for decades, bringing everything from food to freight, coal to cars, passengers to petrol. In fact, the Humber is still the UK's busiest port complex. Our location and connectivity has led to us building a unique body of port-related logistics, engineering and manufacturing expertise and infrastructure, particularly in food, energy and chemical industries. We take raw materials to manufacture, engineer and invent products and services used all over the world. Today, we're building on these credentials and our rich agricultural land to capitalise on the global demand for renewable sources of energy.

That investment, along with Hull being UK City of Culture 2017, is fuelling further demand for high-quality offices, hotels, restaurants, shops and leisure facilities.

We look forward to welcoming you to the Humber.
